

Master’s student in Computer Science at Rochester Institute of Technology with experience in AI/ML, computer vision, big data, and software engineering. Skilled in building scalable data pipelines, machine learning models, and automation systems. Seeking opportunities as a Data Scientist, Machine Learning Engineer, or Software Developer to apply technical expertise in solving real-world challenges.

SKILLS

Programming & Tools:	Python, SQL, Java, C, Rust, MongoDB, Django, Tableau, PySpark, Apache Airflow, PySpark, Databricks
AI/ML Frameworks:	PyTorch, TensorFlow, Keras, Hugging Face Transformers
CV & ML Stack:	OpenCV, Open3D, scikit-learn, XGBoost, NumPy, pandas, matplotlib

TECHNICAL EXPERIENCE

Data Analyst Intern <i>Vivriti Capital Limited</i>	01 2024 — 07 2024 <i>Bangalore, India</i>
- Automated data ingestion and transformation pipelines using Python and Apache Airflow to significantly reduce manual processing time by 50%. - Designed interactive Tableau dashboards for disbursement, loanbook, and repayment schedules, improving decision-making efficiency.	
Computer Science Teaching Assistant <i>Manipal Institute of Technology</i>	09 2023 — 11 2023 <i>Manipal, India</i>
- Mentored 40+ undergraduates in programming labs, increasing project success rates by 25% through structured guidance and code reviews. - Assisted in debugging and grading, reinforcing coding best practices, and algorithmic thinking.	
Python Development Intern <i>CodeClause</i>	10 2023 — 10 2023 <i>Remote</i>
Developed a suite of Python applications, including a voice assistant (SpeechRecognition), a Pygame Flappy Bird clone, a Tkinter-based URL shortener (TinyURL API), and a Tkinter alarm clock.	
Cyber & IT Risk Intern <i>Grant Thornton Bharat LLP</i>	06 2023 — 07 2023 <i>Gurugram, India</i>
Supported SOC 1 and SOC 2 audit engagements by conducting risk assessments across 15+ client vendors, ensuring compliance with regulatory frameworks for third-party vendors.	

RESEARCH AND PUBLICATION

“Applying Deep Learning for the Examination of Voice Disorders in the Identification of Parkinson’s Disease” – Published in IEEE Xplore (2024). Applied SVM, Random Forest, KNN, and XGBoost classifiers for prediction tasks.
<https://ieeexplore.ieee.org/document/10489145>

PROJECTS

- Fine-tuned and benchmarked CLIP and DINOv2 vision models on the Tiny ImageNet dataset, achieving higher accuracy in pairwise image similarity tasks through hyperparameter tuning and optimization. (Python, transformers, torch)
- Mean-shift clustering for adaptive image segmentation, dynamically estimating optimal bandwidth per image, improving segmentation accuracy by 18% compared to fixed-parameter methods. (Python, scikit-learn)
- Movie recommendation system with a content-filtering algorithm trained on user ratings, deployed as a full-stack web application. (Django, HTML, CSS, Bootstrap, jQuery)
- CUDA-based image processing tool supporting edge detection, blurring, and vertical flipping, reducing processing time compared to CPU-based implementations. (CUDA C)
- Device identification tool leveraging network traffic patterns to classify devices (mobile, desktop, tablet) with 92% accuracy, integrated with a GUI for visualization. (Python, Tkinter, Wireshark)

EDUCATION

M.S. Computer Science, Rochester Institute of Technology, USA (Current CGPA: 3.73/4)	2026
B.Tech. Computer Science and Engineering, Manipal Institute of Technology, India (CGPA: 8.10/10)	2024
